Google Sheet

Please use the following Google Sheet:

Google Sheet Link

We aim for diverse project titles so that we can explore a wide range of NLP examples. Go to the link, choose your topic, and add your dataset link.

Please note that you cannot select topics that have already been chosen by your classmates.

Topic Selection

Any supervised or unsupervised problem in the field of NLP is acceptable. (Examples have already been provided during the course.)
You must select your topic by **March 20**.

Presentation Style

Focus on motivating the audience. Present your project in a way that makes others interested and convinced it's valuable. Show enthusiasm and energy. The technical details are important, but the main goal is to communicate the **value and purpose** of your work.

All presentations are **in person**.

Slides Structure

Your slides should follow a clear and logical flow:

- **Motivation:** Explain why you chose the problem. Describe its relevance, use cases, and potential impact. For example, in sentiment analysis, assigning emojis to sentences can help build more expressive chatbots or improve user engagement.
- **Dataset:** Present your dataset clearly. Show a few examples and explain any preprocessing steps and why they were necessary.
- **Approach:** Describe the methods you used (e.g., Logistic Regression, Random Forest, SVM).
- **Results:** Summarize your findings.
- **Code Overview (optional):** You may briefly show your code structure to illustrate the workflow, but avoid line-by-line explanations.

Each person has 5 to 7 minutes for the presentation.

Submission

You need to submit two files:

1. Code with comments (both the `.ipynb` file and its PDF version)
2. Slides

The submission deadline is **April 16**, although you might present before that date.

Evaluation

The presentation will be evaluated based on the following criteria:

- **Content and Relevance:** The topic aligns with course objectives. The problem is clearly defined and well-motivated.
- **Slides:** The content is well-written, clear, and supported by engaging visualizations.
- **Presentation Delivery:** Clarity of speech, confidence, eye contact, and overall fluency.
- **Structure and Timing:** Logical flow of ideas and completion within the 5-7 minute time limit.
- **Technical Quality:** Sound preprocessing steps, justified model selection, and meaningful results.
- **Question Handling:** Ability to answer questions accurately and confidently.
- **Engagement and Passion:** Presenter shows enthusiasm and maintains audience interest.

Attendance and Contribution

I appreciate your active participation in all presentations.

Please follow these instructions carefully:

- Use the attached Excel sheet and add your name to it.
- Evaluate every student's presentation you attend. The final grade for each student will be the average of all received evaluations.
- Do **not** enter grades for presentations you did not attend or only partially attended.
- Upload your completed evaluation sheet at the end of each session.
- Be fair and objective in your evaluations. Friendship or personal bias should not affect your grading.
- Do not share your evaluation sheet with anyone.
- Avoid giving full marks to everyone; thoughtful evaluation is required.

Students who consistently attend and actively contribute by asking questions during multiple presentations will receive **+1 bonus mark** added to their final project grade.

Presentation Order

All names are written on separate pieces of paper and placed in this bag. Each student will draw one name from the bag.
